RE: ATCB

FCC ID: WYALTF0001

ATCB007292

1. Please provide new label, make sure FCC Identifier accord with section 2.925 requirement.

Example: FCC ID AAAXXXXX.

AAA=3 Character Grantee Code; XXXXX = Applicant's unique Equipment Product Code (14 characters or less).

Answer: Sorry for my mistake, I have revised it again. Please kindly check the new provided FCC Lable.

2. Please be advised that FCC rules expect that photographs of a device will be representative of the final device as it is marketed. For this case, which includes photographs of many circuit level EMI/EMC fixes, the assumption is that these exact fixes will be incorporated into every product. You are advised that AmericanTCB recommends that only final configurations should be presented for product review leading to a Certification under the rules for Equipment Authorization. Any photographs which are not truly representative of the product as it is marketed are contrary to FCC procedures.

Please provide a cover letter that states the products are sold the market within the final modified schematics show in internal photos for your client. And test report should add a detailed list of all electrical and mechanical modifications.

Since many electrical and mechanical modifications are employed for spurious radiation suppression, the statement of difference between different models(such as display size) and the worst case result of TM-19 module are provided in your test report, but that don't mean the other models can meet FCC Policy. Some of them may be approved under the same FCC ID, but you should follow KDB178919 and 2.1043 requirement to consider permissive change application.

Answer: Sorry for my mistake, I have provided a new cover letter again and revised test report. Please kindly check the new provided files.

3. This LCD touchmonitor can use the touchscreen serial (RS232) cable or the touchscreen USB cable (but not both) to connect the computer, but test report hasn't any description which cable was used for final testing, please revise it, and add an explanation in test report of how to gain the worst case result.

Answer: Sorry for my mistake, I have revised test report again. Please kindly check it.

Best Regard!
